Schaumburg, Illinois 60173
Tim Sullivan, President

Dear Tim,

Project: Medline Ind – Libertyville, IL

I would like to acknowledge the foreman and crew for their consistent overall workmanship in dealing with the conditions and detailing on this particular project. Because of the many issues needed to be addressed to produce a consistent and quality finished product I would like to commend Sullivan Roofing Company & crew for a job well done.

Some of the concerning issues which were addressed to remove and re-cover the roof system at Medline Facility - Libertyville, IL which were non-typical in roof replacement are as follows

- Excessive moisture on top of the existing sheet which had to be removed prior to existing membrane removal each day.
- Foaming of existing insulation gaps greater than ½" to minimize moisture transmission throughout the field and perimeter areas.
- The marking of existing conduit installed in the top deck channel and off-setting of insulation fasteners so as not to penetrate these existing conduits.
- Maintaining the off-set of insulation joints over the top of a previously installed single layer system.
- Contending with a full time roof inspector.

In dealing with all these factors and maintaining a high degree of professionalism while installing a quality roof system, I would like to commend Sullivan Roofing, the job foreman Javier, and his crew of eight for a job well done.

John Onesti
